COMPRESSOR COMPONENTS

PISTON RINGS AND GUIDE BEARINGS

In order to guarantee best performances to the compressors, piston rings and bearing guides made up of various PTFE compounds are largely used, replacing traditional materials like cast iron, graphite and stratified structured materials.

Pure PTFE chemical inertness makes this material suitable for all the applications where high chemical resistance is required in presence of almost technical gases and fluids.
Exemptions exist in presence of alkaline metals in the molten state, fluorides and fluoridric acid in the gaseous state, and some fluorocarbons at high temperatures and pressures.

PTFE piston rings and guide bearings can be used at temperatures up to 260°C, depending on the system pressure and piston speed this temperature limit value should be lowered. In order to improve wear resistance and to rise the working temperature limit DuPont™Vespel®SP21 is also used to manufacture floating rings, piston rings and guide bearings. Fluorten manufactures also components in natural and filled VICTREX®PEEK for inlet and outlet valves.

Application field of piston rings and guide bearings

- Dry compressors
- Reduced lubrication compressors
- Refrigeration units
- Expansion units
- Pumps for the chemical industry
- Pumps for liquefied gases at low temperature

F10-XX Material Norsok M-710 ED.3 and API 6A approved available on demand.

FLUORTEN PRODUCES:

- PTFE Rulon® Finished parts
- Slipper rings FLUOR-S/SC tapes
- Spring energized seals
- PTFE and HPP ball valves components
- Technopolymers injection moulding
- VICTREX® PEEK / PCTFE Semifinished products
- Official italian distributor of DuPont™Vespel® trademark
